                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     155
                                                                                                                                                                                                                                                                                                                                                     (1-728)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor ollgonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwm12 (gi14732114|gb)AF1290721), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coll XIIO-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       USA

FRATURE:
NAME/KEY: SIMILAR
LOCATION: (136)..(1515)
OTHER INFORMATION: 29% homologous to Caenorhabditis elegans contains similarity
OTHER INFORMATION: to protein kinases (Pfam:pkinase.hmm, score: 149.36),accession
OTHER INFORMATION: number AF098504, Smith-Waterman Score-427.

GENERAL INFORMATION:

APPLICANT: WEISS, BERTRAM

TITLE OF INVENTION: MEMBRANE RECEPTORS FOR ST

FILE REFERENCE: SCH-1811

CURRENT APPLICATION NUMBER: US/10/132,382

CURRENT FILING DATE: 2002-04-26

NUMBER OF SEQ ID NOS: 26

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 5

LENGTH: 7015

TYPE: DNA

ORGANISM: Homo sapiens
